What is a commercial energy storage system?

**Commercial Energy Storage:** Commercial energy storage systems are specifically designed for businesses, industries, and commercial facilities. These systems have lower capacity than grid-scale energy storage but higher capacity than residential systems.

What are commercial and industrial energy storage solutions?

Our commercial and industrial energy storage solutions offer from 30kW to 30+MW. We have delivered hundreds of projects covering most of the commercial applications such as demand charge management, PV self-consumption and back-up power, fuel saving solutions, micro-grid and off-grid options.

How much energy can a commercial energy storage system store?

The amount of energy a commercial energy storage system can store varies widely based on the specific system and its configuration. It's typically measured in kilowatt-hours (kWh), a unit of energy that represents the amount of work that can be done by one kilowatt of power in one hour.

What is a C&I energy storage system?

A C&I (Commercial and Industrial) energy storage system is an energy storage solution designed for commercial and industrial applications, such as factories, office buildings, data centers, schools, and shopping centers.

How long does a commercial energy storage system last?

Generally, a well-maintained commercial energy storage system can have a lifetime of 10 to 20 years. Exro Technologies' Cell Driver(TM) provides a stellar example of this technology at work. Unlike other systems, the Cell Driver(TM) is equipped with a patented Battery Control System(TM) (BCS).
