What is a home battery storage system?

Home battery storage systems are large, stationary batteries that store energy for later use or during a blackout. While the Tesla Powerwall is the most widely known and installed home battery, the playing field is getting more crowded. Home batteries can charge using grid power or solar power.

What is a battery energy storage system?

A battery energy storage system, often referred to as a 'battery storage system', is a system that stores electrical energy in batteries.

How do I choose the right battery storage system?

To choose the right battery storage system, consider your energy use and tariff, the time of use, and the size of your home. Factors to consider when choosing a system include: the right size battery, the total installed cost of the battery storage system versus the expected savings, and the system's efficiency and lifespan.

How does a home battery system work?

These home battery systems are wired to your home's main electrical panel, becoming a permanent part of your home's electrical system. Most battery systems are grid-tied, which means the battery is connected to the power grid, drawing power from the grid when it needs to charge up. This is where the permits and inspections come in.

Should I invest in a battery storage system?
