How does a battery management system work?

Electrical energy is generated from either a power plant or renewable energy source. The BESS converts this electrical energy into chemical energy, storing it within the electrolyte between battery cells. A battery management system (BMS) monitors the battery charging process optimising it and preventing overcharging, overheating, or cell damage.

How long can a battery store and discharge power?

The storage duration of a battery is determined by its power capacity and usable energy capacity. For example, a battery with 1MW of power capacity and 6MWh of usable energy capacity will have a storage duration of six hours.
