What is a rule-based energy management strategy?

Rule-based energy management strategies are widely utilized in practical controllers benefitting from the small amount of computation. Therefore,a rule-based energy scheduling strategy is developed to allocate energy and characterize the system's operational state.

The Markov decision process (MDP) is a nonlinear decision-making model. The MDP has five main stages which are: {t, x T, h T, P, R}. Where t denotes time, it defines decimal operations. S is the set of all quantifiable non-empty states of the system. h T ? A is a set of all possible decision-making behaviors when the system is in a given state.
