

How do I ensure a suitable operating environment for energy storage systems?

To ensure a suitable operating environment for energy storage systems, a suitable thermal management system is particularly important.

What is the temperature unevenness in a battery pack?

The results show that the optimized solutions 1 and 2 are both top-suction and bottom-blowing airflow organization types. However, due to the poor airflow circulation at the top of the container, temperature unevenness still exists inside the battery pack, with the maximum temperatures of 315 K and 314 K for the two solutions.

How to reduce the temperature of a battery pack?

In optimized solution 2, the temperature of the corresponding battery packs is reduced by changing the state of the fan in battery packs 4 and 11. In optimized solution 3, the temperature of the corresponding battery pack has been significantly reduced by further changing the status of the fan in battery packs 1 and 8.

What is the maximum temperature of a battery pack?

However, due to the poor airflow circulation at the top of the container, temperature unevenness still exists inside the battery pack, with the maximum temperatures of 315 K and 314 K for the two solutions. Both optimized solutions 3 and 4 belong to the type of airflow organization with central suction and air blowing at both ends.

What is the temperature uniformity of a battery pack?

As can be seen from Fig. 11, Fig. 12, the battery pack under the initial scheme shows a poor temperature uniformity in general. And the maximum temperature of the single battery reaches 325 K, which exceeds the permissible range. Battery packs 3 and 10 near the inlet are more effectively cooled, with a lower temperature of 308 K.

How does a cooling strategy improve temperature inhomogeneity?

This new cooling strategy improved the temperature inhomogeneity by reducing the temperature uniformity between cells by 3.2 °C and by reducing the consumed cooling flow by 38 %. Shi et al. investigated the effect of setting the air inlet on the side wall of the battery pack to the internal temperature field.
