In recent years, many provinces in China, such as Hebei, Shandong, and Liaoning, have issued grid-connection policies on the mandatory configuration of energy storage equipment for renewable energy sources [14], which stipulates that only WPGs with a certain proportion of energy storage capacity can be connected to the grid. Under these criteria, in order to obtain ...

challenge, many energy scenarios focus not only on the best guesses about the future paths under the current policy, but they also provide the estimates of the required changes in the energy system to achieve certain climate and environmental targets. The goal of this paper is to review the value and limits of energy scenarios and, in particular,

The large-scale development of energy storage began around 2000. From 2000 to 2010, energy storage technology was developed in the laboratory. Electrochemical energy storage is the focus of research in this period. From 2011 to 2015, energy storage technology gradually matured and entered the demonstration application stage.

Shared energy storage can make full use of the sharing economy's nature, which can improve benefits through the underutilized resources [8]. Due to the complementarity of power generation and consumption behavior among different prosumers, the implementation of storage sharing in the community can share the complementary charging and discharging ...
