What should I do when working with compressed air?

Display equipment directions. Make sure compressor instructions are visible for all personnel to reference. Wear appropriate protective gear. Safety goggles, ear protection and other appropriate protective gear should be worn when working with compressed air. Locate equipment in visible areas.

What is compressed air safety guidance?

Reflecting the volatility of compressed air, this guidance promotes greater safety knowledge and is addressed to compressor designers, manufacturers, installers and users. Emphasis is on raising awareness of headline dangers of air compression use, eg orificial bodily entry, skin penetration, explosions and optical damage caused by particles.

What should you do if a compressor is not working?

Check maximum pressure ratings on compressor parts. Pipes, hoses and fittings must have the same maximum pressure as the compressor. Keep shutoff valves within reach. In case anything goes wrong, workers should be able to immediately cut off the air source. Conduct employee training on equipment.

Is compressed air dangerous?

Compressed air is an increasingly common utility in workspaces around the world from factories to construction sites. Although it may seem easy to operate, compressed air can become dangerous if used incorrectly. Here's what you need to know when it comes to safe operation. Schedule routine maintenance.

What should you wear when working with compressed air?

Wear appropriate protective gear. Safety goggles, ear protection and other appropriate protective gear should be worn when working with compressed air. Locate equipment in visible areas.
