What voltage does a low voltage grid supply operate at?

The low voltage grid supply in the UK operates at voltages and frequencies harmonized by BS EN 50160,i.e. at 230/400 V 50 Hz a.c. (or 230 V 50 Hz a.c. for three-wire three phase systems earthed at one of the phases).

Can EESS controller be connected to other energy sources?

The EESS controller may be connected to sources of energy via a.c. coupling or d.c. coupling. Necessarily, the connection to the grid supply will be via a.c. coupling. Coupling to other energy sources at standard voltages and frequencies defined in BS EN 50160 provides ready compatibility in the ratings of devices.
