What is a fully automated solar module disassembly line?

The fully automated solar module disassembly line combines a 10m x 2m &#215; 5.5m glass separator, a 2.5m x 1.7m x 1.5m frame separator and a 17.4m x 1.9m junction box separator. It has an annual capacity of 28 MW and is said to enable complete separation of glass and aluminum as well as cell and wiring material.

How does a glass separator work?

The glass separator is able to process both broken and unbroken panels. The machine presses the panel with a metal plate from the top and the panel slides to the heated blade, which in turn separates the cells and EVA sheet from the glass. This process takes around 90 seconds per unit and is also applicable to modules with backsheets.
