Electrospinning, a highly versatile nanotechnology for nanofibers fabrication, has been widely utilized in energy research over the past decades [70]. This straightforward, incessant, and cost-effective method involves electrohydrodynamic phenomena to form ultrathin fibers from an enormous number of materials, including polymers, inorganic ceramics, composites, etc.

Expertise related to UN Sustainable Development Goals. In 2015, UN member states agreed to 17 global Sustainable Development Goals (SDGs) to end poverty, protect the planet and ensure prosperity for all. This person's work contributes towards the following SDG(s):
