

Which hydride storage systems are suitable for small submarines?

Compressed, and metal hydride-based H₂ storages are suitable for small to medium submarines. The most critical development in conventional underwater applications in recent years is to use hydrogen energy systems, including Air Independent Propulsion (AIP) systems.

Which technology is suitable for a small submarine?

For submarines, as another underwater application, metal hydrides and compressed hydrogen storage are suitable for small to medium-sized submarines. However, reforming technology, which provides onboard hydrogen production, combined with PEM fuel cell is decidedly suitable for large-scale submarines as Air Independent Propulsion system.

What are the future directions of marine energy storage systems?

Further, we summarize the eco-marine power system, and the future directions of marine energy storage systems are highlighted, followed by advanced AI-battery technology and marine energy storage industry outlooks up to 2025. 1. Introduction

Could lithium-sulfur cells replace lithium-ion batteries in marine autonomous systems?

Lithium-sulfur (Li-S) cells have five times the theoretical maximum specific energy of lithium-ion. The increased specific energy and improved lower density of the cells mean that they could be an excellent replacement for the current lithium rechargeable cells used in marine autonomous systems.

Why do Submarines need lead-acid batteries?

For over a century, lead-acid batteries have been the standard source of stored energy for marine vehicles; they are utilized to power the vehicle's main propulsion, or as a stand-by battery. However, more is required of submarines - they must demonstrate increased endurance and cope with greater speed demands.

Could lithium-ion batteries be a game-changer in marine applications?

A new generation of energy storage technology is required, based on lithium-ion batteries (LIBs).^{42,43} Lithium-ion batteries could be a game-changer in marine applications, with the potential to be a primary source of power not just for submarines, but also unmanned underwater vehicles (UUVs) and torpedoes.

Energy storage is an enabling technology for various applications such as power peak shaving, renewable energy utilization, enhanced building energy systems, and advanced ...

The toughness of flexible energy storage devices has seldom been mentioned in literatures, while it is a highly desired feature that determines the application versatility of devices. Besides the ...

reviews several types of energy storage systems for marine environments, which have been extensively used to improve the overall performance of marine vehicles. Key technological ...

Selected studies concerned with each type of energy storage system have been discussed considering challenges, energy storage devices, limitations, contribution, and the objective of each study. ... With an energy density of 620 kWh/m³, Li-ion batteries appear to be highly capable technologies for enhanced energy storage implementation in the ...

Dielectric capacitors are critical energy storage devices in modern electronics and electrical power systems 1,2,3,4,5,6 pared with ceramics, polymer dielectrics have intrinsic advantages of ...

Zongyang Li: Data curation. Xin Wang: Formal analysis. Zhihao Wang ... Stable hydrogel electrolytes for flexible and submarine-use Zn-Ion batteries. ACS Appl. Mater. Interfaces ... Hydrogel electrolyte with high tolerance to a wide spectrum of pHs and compressive energy storage devices based on it. Small Methods, 7 (3) (2023), p. e2201448 ...

The development of new energy storage technology has played a crucial role in advancing the green and low-carbon energy revolution. This has led to si...

Qin Li's 17 research works with 2,257 citations and 6,699 reads, including: Interphasial Pre-lithiation and Reinforcement of Micro-Si Anode through Fluorine-free Electrolytes

Aqueous zinc-based energy storage (ZES) devices are promising candidates for portable and grid-scale applications owing to their intrinsically high safety, low cost, and high theoretical energy ...

The hybrid device displays a high specific energy of 41.2 Wh/kg at a high specific power of 519 W/kg and a high energy efficiency up to 76.8 %. By using directly salt-lake water (Qinghai Lake and Yuncheng Salt Lake) as electrolyte, the hybrid device also displays excellent electrochemical performances.

Midget U-Boats: Germany's Tiny Submarines . Mark Felton Productions. 2.16M subscribers. Subscribed. 25K. 1.5M views 4 years ago. Find out the story of Germany's midget submarine force in WWII and its struggle to ...

Antiferroelectric materials used for energy-storage devices show the advantage of high power density but have low efficiency and inferior cycling reliability.

FC2G submarines were developed by a French company named Naval Group. The submarine is powered by second-generation fuel cell technology. Hydrogen fed to the system is not stored in storage tanks but generated on board. A diesel reforming process is employed for the production of high-purity hydrogen.

Energy storage ability is mainly measured by two major indicators, the discharged energy density (U_e) and the energy efficiency (η). The former one is defined as: $U_e = \frac{1}{D} \int_0^D E dD$, where E and D are the applied electric field and the corresponding electrical displacement. And the latter one is calculated by the following

formula: $= U_e U_e + U_L o s s, \dots$

Chinese scientists unveiled a quantum computer prototype named "Jiuzhang 3.0" with 255 detected photons on Wednesday, once again pushing the boundaries of photonics quantum computing technology.

Selected Regular Journals . 1.Bojing Lu, Fei Zhuge, Yi Zhao, Yu-Jia Zeng, Liqiang Zhang, Jingyun Huang, Zhizhen Ye, and Jianguo Lu *, Amorphous oxide semiconductors: from fundamental properties to practical applications, Current Opinion in Solid State & Materials Science 2023 (in press). [IF=11.000] 2.Bojing Lu, Dunan Hu, Ruqi Yang, Jigang Du, Lingxiang ...

Xuan Liu, Kang Li, "Energy Storage Devices in Electrified Railway Systems - A Review", Transportation Safety and Environment, accepted on 3 June 2020. 32. Changqing Liu, Kang Li, Xuan Liu, Youqing Wang, "Distributed unknown input and state estimation for nonlinear multi-agent systems with applications to battery management".

Novel flexible storage devices such as supercapacitors and rechargeable batteries are of great interest due to their broad potential applications in flexible electronics and implants. Hydrogels are crosslinked hydrophilic polymer ...

The toughness of flexible energy storage devices has seldom been mentioned in literatures, while it is a highly desired feature that determines the application versatility of devices. Besides the softness that enables arbitrary deformations, our Zn-MnO₂ battery also possesses high toughness due to the enhanced modulus and fracture ...

With the rapid development of economic and information technology, the challenges related to energy consumption and environmental pollution have recen...

Underwater vehicles use hydrogen energy systems having Air Independent Propulsion (AIP) systems. This paper review H₂/O₂ storage preferences coupled with PEM ...

Dielectric capacitor is a new type of energy storage device emerged in recent years. Compared to the widely used energy storage devices, they offer advantages such as short response time, high safety and resistance to degradation. ... Fei Li: Conceptualization, Funding acquisition, Project administration, Supervision, Writing - review ...

Grain-orientation-engineered multilayer ceramic capacitors for energy storage applications. Nature Materials, 19, 999-1005 (2020). ... Fei Li, Ruimin Chen, Tianfu Zhang, Xiaodong Cao, Shujun Zhang, Thomas R. Shrout, Hairong Zheng, K. Kirk Shung, Mark S ...

The projected increase in world energy consumption within the next 50 years, coupled with low emission

requirements, has inspired an enormous effort t...

Here we present a simple and effective method to enhance the energy storage properties of PbZrO₃ antiferroelectric through ionic pair (with small ionic radius) doping. Li + ...

Wan Yufei, Liu Chunyu, Li Liwan, Huang Yan, Hao Ming, Wang Wenguang. Temperature Drop and Transportation Scheme of Submarine Pipeline Considering Overburden Heat Storage[J]. Journal of Petrochemical Universities, 2021, 34(1): 88-94.

select article Corrigendum to "Multifunctional Ni-doped CoSe₂ nanoparticles decorated bilayer carbon structures for polysulfide conversion and dendrite-free lithium toward high-performance Li-S full cell" [Energy Storage Materials Volume 62 (2023) 102925]

Carbon emissions have caused 4 °C (7.2 °F) of warming that could cause a sufficient eventual sea level rise to submerge land that is currently home to 470-760 million people globally [1]. To cope with global climate changes and energy supply shortages and to achieve carbon emission reductions, developed countries must adjust development strategies ...

Hydrogel electrolytes, which feature intriguing characteristics of being soft and wet, accompanied with high solubility of zinc salts, are especially advantageous for fabricating flexible Zn-based ... This review provides a ...

In the meantime, the energy storage plays an indispensable role in building sustainable energy output systems, since some renewable energy (e.g. solar and wind energy) are intermittent and unstable [1], [2]. Batteries and supercapacitors are the two most promising candidates that are widely used as energy storage devices [2], [3], [4].

Buoyancy Energy Storage Technology: An energy storage ... The proposed Buoyancy Energy Storage Technology (BEST) solution offers three main energy storage services. Firstly, BEST ...

Hence, a popular strategy is to develop advanced energy storage devices for delivering energy on demand.[1-5] Currently, energy storage systems are available for various large-scale applications and are classified into four types: mechanical, chemical, electrical, and electrochemical,[1,2,6-8] as shown in Figure 1.
