Do buried pipe cooling systems save energy?

The study indicated that using a buried pipe cooling system with a mechanical ventilation system in hot summer and cold winter regions does not contribute to energy savings. However, in areas with hot summers and warm winters, combining buried pipe cooling systems with ventilation systems can enhance the energy efficiency of summer cooling.

Can buried pipe cooling systems be combined with mechanical ventilation systems?

The study indicated that using a buried pipe cooling system with a mechanical ventilation system in hot summer and cold winter regions does not contribute to energy savings.

Are liquid cooled battery energy storage systems better than air cooled?

Liquid-cooled battery energy storage systems provide better protection against thermal runaway than air-cooled systems. "If you have a thermal runaway of a cell, you've got this massive heat sink for the energy be sucked away into. The liquid is an extra layer of protection," Bradshaw says.
