When will silicon hairspring technology be widely available?

The CSEM patent will expire in 2021 and the technology will become available. Silicon hairspring are in used across different Swatch group brands (Breguet,Omega,etc.). The Patek Philippe advanced research department unveiled their Spiromax© hairspring in 2006. Rolex presented their Syloxi© hairspring in 2014.

What is a silicon hairspring?

Borrowed from the semiconductor industry, silicon presents remarkable properties to manufacture hairsprings outperforming those made from conventional metal alloys. But until very recently, silicon hairsprings have been used by a limited number of companies, which patented the technology...

How does thermo-compensation work for silicon hairsprings?

Thermo-compensation can be performed with remarkable efficiency for silicon hairsprings via oxidization(which is precisely one of the central claims of the patent that has just expired - more information about this below).

Who owns silicon hairsprings?

Silicon hairsprings are now the domain of a consortium led by CSEMand backed by three watchmaking giants: Rolex,Patek Philippe,and the Swatch Group. Thanks to the patents filed by its backers,the consortium has a monopoly on the use of silicon hairsprings in Swiss watchmaking,helped by its willingness to defend its territory.

Are silicon-based energy storage systems a viable alternative to traditional energy storage technologies? Silicon-based energy storage systems are emerging as promising alternatives to the traditional energy storage technologies. This review provides a comprehensive overview of the current state of research on silicon-based energy storage systems, including silicon-based batteries and supercapacitors.

Who are the power houses collaborating on silicon hairsprings?

Silicon hairsprings - An interesting and strategic alliance uniting three power houses: Swatch,Rolex and Patek Philippejoining forces through CSEM (Centre Suisse d'Electronique et de Microtechnique) - Above,a Breguet silicon hairspring deriving from this joint research project.

Silicon-based energy storage devices have several advantages over traditional technologies, including their high abundance, recyclability, low environmental impact, long ...

Silicon hairsprings are one of the hot technologies in the mechanical watch market. Let's dive a little deeper to find out why. ... Ulysse Nardin, who was the first to showcase a silicon hairspring, has continued their ...

Long Duration Storage Shot | Department of Energy. The Long Duration Storage Shot establishes a target to reduce the cost of grid-scale energy storage by 90% for systems that deliver 10+ ...

This led to more research and development. Many watchmakers, most notably Abraham-Louis Breguet (1747-1823) and the firm Arnold & Dent, experimented with glass hairsprings as the material provided a lot of positives ...

CSEM"s patent for silicon hairsprings is specific to the production of hairsprings from (001) silicon wafers, which is the commonly used orientation with the DRIE process. ...

With the help of regulation and a supply of power from the mainspring, the hairspring and balance wheel can overcome external forces and run at a precise resonant ...

At Baselworld in 2017, Zenith showed an integrated silicon regulator without a separate balance wheel or hairspring stead, it uses an integrated silicon component that ...

Therefore, silicon brings an obsolescence factor into the mechanical watch which is fundamentally against its core attributes of longevity, reparability in the long run, etc." Planned obsolescence is a frightening term ...

As far as amagnetism is concerned, it doesn't seem to be Rolex's focus with their hair springs. It's not enough of a factor in the public marketing arena nor do I think they want to ...

The growing demand for energy has driven significant progress in energy storage systems, with a particular focus on improving the energy density of lithium-ion batteries (LIBs). In an effort to create more efficient LIBs, ...

Silicon or silicone? Two very different things.. Movement parts are made of silicon, not silicone, and I wouldn"t worry about that. As a material for hairsprings for example, silicon ...

A quick search and I got my answer (should have done it before). It seems the black silicon balance spring is a sign of an 8500b movement. Does this mean ALL planet ...

Ulysse Nardin, who was the first to showcase a silicon hairspring, has continued their development, with more recent entries being Patek, Rolex and Damasko. It's no easy feat; lots of R& D costs are sunk into these types of ...

With high energy density, silicon-based energy storage devices can store a large amount of energy in a compact and light-weight form. Furthermore, as a widely used material ...

A torque-restoring element for an oscillator for a mechanical timepiece and having an oscillator frequency, said torque restoring element comprising a spiral spring body having a number N ...

To search a useful superconductor, one must have high critical temperature, high upper critical field (Hc2) and

high critical current density (Jc), nevertheless, it is better to show chemical ...

Silicon hairspring are in used across different Swatch group brands (Breguet, Omega, etc.). The Patek Philippe advanced research department unveiled their Spiromax© ...

The oven used for the heat treatment of the hairspring after coiling. They are then separated in a box that is shaken. An incredibly simple/traditional process in comparison to the way all other operations are performed but still this is the most efficient method. The inner size is ...

The width varies cyclically for each half-turning of the silicon hairspring. The equation assumes the nominal Young's modulus is 1/S 11 or 130.2 GPa. FIG. 6 graphically shows the variation of ...

The hairspring provides restoring force to the balance wheel, enabling isochronal oscillations. It is a flat spiral spring that breathes at each vibration of the balance wheel. The spring ...

This blue is essential to us, because it symbolizes the long-lasting performances which we hold ourselves to. This hairspring is insensitive to magnetic fields, unwavering in the face of temperature variations, and resistant to shocks as to corrosion. ... This is our Syloxi hairspring. ...

silicon-based energy storage devices and identify the chal-lenges that need to be addressed to fully realize their poten-tial. The second objective is to explore new and innova ...

These parallel pins are called curb pins and do not directly contact the hairspring, but allows the hairspring to "breathe" and bounce across each pin as it expands and ...

Particularly innovative, Rolex's Syloxi hairspring incorporates the best of silicon technology. It counters the shortcomings of ferromagnetic hairsprings and therefore ...

Hairspring is a fine spiral spring, which is the key component in mechanical watch movement for timekeeping. According to literatures, there are only few studies on hairsprings ...

Electrical energy storage technologies play a crucial role in advanced electronics and electrical power systems. Electrostatic capacitors based on dielectrics have emerged as promising candidates for energy ...

It was also upgraded with a blue-hue oxide layer finish in 2005 to reinforce its long term stability. Swatch Group, Rolex and Patek Philippe - Silicon Hairspring Project. What's better than one of ...

Presently, the energy crisis is a critically elevated profound societal problem, which eventually impedes the economic development of the globe (Goodenough, 2014, Mehtab et ...

The Syloxi hairspring is the optimal silicon hairspring according to Rolex. The fruit of many years of research

and carrying several patents, this particularly ... house, that provides a ...

Silicon-based energy storage systems are emerging as promising alternatives to the traditional energy storage technologies. This review provides a comprehensive overview of ...

The Syloxi hairspring is a silicon and silicon-composite mix, designed to overcome some of the issues faced by a traditional hairspring, and it is currently being used in Caliber ...

The silicon hairspring was Master Dynamic's first major invention in watchmaking, making them one of the few companies anywhere able to develop a silicon hairspring from scratch. In fact, the players outside of ...
