What are the business models for large energy storage systems?

The business models for large energy storage systems like PHS and CAES are changing. Their role is traditionally to support the energy system, where large amounts of baseload capacity cannot deliver enough flexibility to respond to changes in demand during the day.

Are energy storage projects ready for a bright future?

In anticipation of a bright future, the first projects with energy storage are being set up. We have analyzed some of these cases and clustered them according to their position in the energy value chain and the type of revenues associated with the business model.

How will storage solutions impact the energy industry?

Storage solutions will create new connections between power generation and energy users, and between producing/consuming players ('prosumers') as well. Trading and arbitrage over time will create new business opportunities for the existing and new players in the energy field. However, we are not there yet.

Is energy storage a new business opportunity?

With the rise of intermittent renewables, energy storage is needed to maintain balance between demand and supply. With a changing role for storage in the energy system, new business opportunities for energy storage will arise and players are preparing to seize these new business opportunities.

How will energy storage technology help balancing supply and demand?

Energy storage technology will become the linking pin in the energy system. By balancing supply and demand it will create the platform for many new services. Traditionally, utility companies have experience in balancing demand and supply.

Are energy storage business models convincing?

Neither clear nor convincing business models have been developed. The lessons from twelve case studies on energy storage business models give a glimpse of the future and show what players can do today.
