

Does Luxembourg have a good water supply?

The local water supply in Luxembourg is good quality and the system is fairly easy to navigate for expats arriving in the country. The water supply is administered at a local level, with each commune having its own provider. This can't be chosen by the individual consumer, though.

How many groundwater resources does Luxembourg have?

a total of 250 groundwater resources. While the country is able to cover current needs, it must prepare for the various challenges facing water in Luxembourg. Disruptions to the natural cycle of water Due to climate change, extreme weathers are an increasing reality for Luxembourg, as elsewhere.

Is surface water safe to drink in Luxembourg?

Because surface water contains germs and micro-organisms, it must go through complex treatment processes before it is safe for drinking. In Luxembourg this is done by the Syndicat des eaux du barrage d'Esch-sur-Sûre (SEBES) which currently has a capacity of between 70,000 to 110,000 m<sup>3</sup> per day.

Does Luxembourg have a good water quality by 2027?

Under the EU Water Framework Directive, member states should achieve good natural quality for their waters by 2027. In Luxembourg, only around 2% of surface water bodies and 50% of its groundwater bodies meet this target, mostly due to pollution from agriculture and the effects of urbanisation. Water protection zones

Does Luxembourg have a water shortage?

Luckily this break occurs in the summer, when Luxembourg faces its peak risk of water shortages. The overall trend is one of increasing demand for water in the country, particularly in relation to the growing population and its associated needs. A study conducted by the University of Luxembourg led by Ass.

How does pollution affect Luxembourg's water resources?

Luxembourg's water resources are vulnerable to pollution from human activities. The most widespread pressures on waterbodies stem from nitrates, pesticides and phosphates from households and agriculture. This leads to polluted groundwater sources which puts pressure on our water reserves as well as biodiversity and soil quality.
