

What are flywheel energy storage systems (fess)?

Flywheel Energy Storage Systems (FESS) are a pivotal innovation in vehicular technology, offering significant advancements in enhancing performance in vehicular applications. This review comprehensively examines recent literature on FESS, focusing on energy recovery technologies, integration with drivetrain systems, and environmental impacts.

How does a flywheel energy storage system work?

Flywheel Energy Storage Systems (FESS) rely on a mechanical working principle: An electric motor is used to spin a rotor of high inertia up to 20,000-50,000 rpm. Electrical energy is thus converted to kinetic energy for storage. For discharging, the motor acts as a generator, braking the rotor to produce electricity.

Can flywheel energy storage systems improve vehicular performance and sustainability?

Conducted a comprehensive analysis of FESS technologies and their integration with current vehicle powertrain systems. Evaluated the benefits and challenges of FESS in automotive applications.

What are some new applications for flywheels?

Other opportunities for flywheels are new applications in energy harvest, hybrid energy systems, and flywheel's secondary functionality apart from energy storage. The use of new materials and compact designs will increase the specific energy and energy density to make flywheels more competitive to batteries.

How can flywheels be more competitive to batteries?

To make flywheels more competitive with batteries, the use of new materials and compact designs can increase their specific energy and energy density. Additionally, exploring new applications like energy harvesting, hybrid energy systems, and secondary functionalities can further enhance their competitiveness.

Can a flywheel system store kinetic energy?

However, these systems face limitations in terms of retrofitting complexity and the inability to store energy for long durations. Flywheel systems, in contrast, can store kinetic energy more efficiently, offering the flexibility to discharge it rapidly on demand.
