Are phase change materials suitable for thermal management?

With the increasing demand for thermal management, phase change materials (PCMs) have garnered widespread attention due to their unique advantages in energy storage and temperature regulation. However, traditional PCMs present challenges in modification, with commonly used physical methods facing stability and compatibility issues.

Do phase-based latent heat change materials absorb thermal energy?

Among them, the storage of thermal energy by phase-based latent heat change materials (PCMs) has attracted much attention for their ability to absorb and release large amounts of latent heat during phase transfer progress[1,2,3,4].

Is polyethylene glycol-2000 a phase change material?

In this paper, polyethylene glycol-2000 (PEG) was used as a phase change material and 2-methacrylate 6- [4-(4-methoxy-phenylazo)-phenoxy]-hexyl ester (MAHE, AZO compound) was used as molecular solar thermal (MOST) energy storage material to form composite fiber material through electrospinning.

Is phase change storage a good energy storage solution?

Therefore, compared to sensible heat storage, phase change storage offers advantages such as higher energy density, greater flexibility, and temperature stability, making it a widely promising energy storage solution.

How to prepare a composite material for solar energy storage?

In this paper, an electrospinning composite material for solar energy storage was prepared by combining 2-methyl-acrylic acid 6- [4-(4-methoxy-phenylazo)-phenoxy]-hexyl ester (MAHE) as molecular solar thermal (MOST) molecule and polyethylene glycol-2000 (PEG) as phase change material (PCM) using electrospinning technique for the first time.

Energy storage with PCMs is a kind of energy storage method with high energy density, which is easy to use for constructing energy storage and release cycles [6] pplying ...

Phase change materials (PCM) utilization in energy storage systems represents a point of interest and attraction for the researchers to reduce greenhouse gas emissions.

Harvesting solar energy with molecular photoisomers can be an attractive way for the development of cleaner energy resources. Molecular solar thermal energy storage (MOST) is a concept based on molecular ...

performance of phase change energy storage materials for the solar heater unit. The PCM used is  $\text{CaCl}_2 \cdot 6\text{H}_2\text{O}$ . The solar heating system with  $\text{Na}_2\text{SO}_4 \cdot 10\text{H}_2\text{O}$  has more F values.

Chloride molten salt is the most promising thermal energy storage materials for the next generation concentrated solar power (CSP) plants. In this work, to enhance the thermal ...

Solid-liquid phase change materials (SL-PCMs) change their internal molecular arrangement from an ordered crystalline structure to a disordered amorphous one when ...
