

How will Mongolia's new water infrastructure improve water supply?

The Mongolian government matched this investment with a \$111.8 million investment to improve water purification, increase wastewater recycling and implement policies within the Mongolian government to sustain this new infrastructure. The MCC predicts that this investment will increase water supply in Mongolia's capital city by more than 80 percent.

What is the water supply project?

The Water Supply Project, under the Mongolia Water Compact, is designed to address the problem of limited long-term sustainable supplies of water for Ulaanbaatar, the capital city of Mongolia. The Project comprises three closely related investment activities and must be implemented within a five-year period in accordance with the MCC rules.

What is the "water sector sustainability activity"?

The "Water Sector Sustainability Activity" is intended to ensure that the projects implemented under the Millennium Challenge Mongolia Water Compact have lasting benefits and support the long-term sustainability of Ulaanbaatar city's water and wastewater system.
