The coexistence of renewable power and carbon capture can achieve mutual benefits for each other [9]. On the one hand, the deployment of PCC can improve the flexibility of FFPP by quickly shifting the steam drawn-off from the turbine, thus is helpful for accommodation of renewable power in the grid.

Energy storage (ES) plays a significant role in modern smart grids and energy systems. To facilitate and improve the utilization of ES, appropriate system design and operational strategies should ...

Electric vehicles (EVs) are receiving considerable attention as effective solutions for energy and environmental challenges [1]. The hybrid energy storage system (HESS), which includes batteries and supercapacitors (SCs), has been widely studied for use in EVs and plug-in hybrid electric vehicles [[2], [3], [4]]. The core reason of adopting HESS is to prolong the life ...

Consumer purchase intention can realize the mutual benefit of investors and users. Abstract. ... For the optimization problems of energy storage system capacity and house price, the particle size is enough.
