

# New regulations open up a 100 billion yuan energy storage field

Will China's new energy storage sector grow in 2024?

BEIJING, Jan. 24 (Xinhua) -- China's new energy storage sector has seen a rapid growth in 2024, with installed capacity surpassing 70 million kilowatts, said an official with the National Energy Administration (NEA).

How big is China's energy storage industry?

As the country ratchets up policy support for the sector, an increasing number of Chinese enterprises have jumped on the bandwagon to develop business layouts oriented toward energy storage and compete in the lucrative market, with the industry scale predicted to surpass 1 trillion yuan (about 138.39 billion U.S. dollars) by 2025.

Is China's power storage capacity on the cusp of growth?

[WANG ZHENG/FOR CHINA DAILY] China's power storage capacity is on the cusp of growth, fueled by rapid advances in the renewable energy industry, innovative technologies and ambitious government policies aimed at driving sustainable development, experts said.

Which regions in China have the most energy storage capacity?

Geographically, the top five provincial-level regions in China for cumulative installed capacity of new energy storage are Inner Mongolia, Xinjiang, Shandong, Jiangsu, and Ningxia.

Why is energy storage important in China?

Developing energy storage is an important step in China's transition from fossil fuels to renewable energy, while mitigating the effect of new energy's randomness, volatility and intermittence on the grid and managing power supply and demand, he said.

How many new energy storage projects are there?

According to NEA's Bian, the government has released a list of 56 new-type energy storage pilot demonstration projects since the beginning of this year, including 17 lithium-ion battery projects and 11 compressed air energy storage projects, among others.

In terms of investment scale, the newly operated new energy storage projects have driven direct investment of more than 30 billion yuan (\$4.2 billion) based on the current market price, said Liu Yafang, an official with the ...

The city government of Guangzhou, Guangdong province, issued opinions recently about advancing the new energy storage industry. It aims to lift annual revenues in this field to 100 billion yuan (\$13.68 billion) by 2027. The city government of Guangzhou, Guangdong province, issued opinions recently about advancing the new energy storage industry

## **New regulations open up a 100 billion yuan energy storage field**

Officials said the newly added installed capacity topped 22 million kilowatts in 2023, up more than 260 percent compared to the end of 2022. The government says the addition of new energy storage installed capacity has promoted investments worth more than 100 billion yuan, or 14 billion U.S. dollars, since the 14th Five-Year Plan.

Major power generation enterprises nationwide have also stepped up investment in power projects since the beginning of this year, investing 136.5 billion yuan (\$18.84 billion) during the first ...

Their new energy-storage capacity in 2022 accounted for 86 percent of the global total, up 6 percentage points from 2021. The CNESA report estimated that China's cumulative installed capacity of new energy storage in 2027 may reach 138.4 gigawatts if the country's provincial-level regions achieve their targets of energy-storage construction.

Since the beginning of the 14th Five-Year Plan period (2021-2025), newly installed new-type energy storage capacity in China has directly promoted investment of more than 100 billion yuan (\$13.8 billion), driving ...

On June 5, the Guangdong Provincial Development and Reform Commission and the Guangdong Provincial Energy Bureau issued Measures to Promote the Development of New Energy Storage Power Stations in Guangdong Province, which mainly proposed 25 measures from five aspects: expanding diversified applications, strengthening policy support, improving ...

An AVIC Securities report projected major growth for China's power storage sector in the years to come: The country's electrochemical power storage scale is likely to reach 55.9 gigawatts by 2025 ...

The project is located in Shahekou District, Dalian City, Liaoning Province, with a total capacity of 200MW/800MWh and a total investment of about 3.8 billion yuan. The capacity of the first-phase project is 100 MW/400MWh, ...

The NDRC said new energy storage that uses electrochemical means is expected to see further technological advances, with its system cost to be further lowered by more than 30 percent in 2025 compared to the level at the end of 2020. ... up from the current 42 percent, this would create challenges to maintaining stable operation of the ...

[A 2 billion yuan energy storage project was signed in Hecheng District, Hunan] On January 29, 2023, the signing ceremony for China's power energy storage integrated equipment production line project to settle in Hecheng District, Hunan was held. The project has a total investment of 2 billion yuan and a total construction area of about 80,000 square meters.

as Early as December 15, 2023, Shenzhen Also Set up Another Energy Storage Fund, Which Is Shenzhen's New Energy Storage Industry Equity Fund. The Energy Storage Fund Has a Total Contribution of 6.51 Billion

## **New regulations open up a 100 billion yuan energy storage field**

and Is Mainly Used for Investment in Key Projects Such as Headquarters Research and Development, Mining, Production and Manufacturing, ...

As the country ratchets up policy support for the sector, an increasing number of Chinese enterprises have jumped on the bandwagon to develop business layouts oriented ...

The past few decades have witnessed fossil fuels and other nonrenewable natural resources heading towards depletion and environmental pollution becoming increasingly serious [1].As an alternative energy source, renewable energy has been considered the strategic choice to combat the energy crisis, reduce environmental pollution, and promote socially and ...

China aims to further develop its new energy storage capacity, which is expected to advance from the initial stage of commercialization to large-scale development by 2025, with an installed capacity of more than 30 million ...

Moreover, the flexible layout and short construction cycle of new energy storage, along with its wide range of application scenarios, have directly driven investments nearing ...

Liangjiang New Area in Southwest China's Chongqing municipality signed 28 projects totaling over 30 billion yuan (\$4.4 billion) into effect and hired the first group of 11 global investment consultants at the 2023 Global Investment Promotion Conference held on January 11, marking the beginning of the new area's 2023 global investment promotion campaign.

Summary. 2020 was an unusual year in the history of the People's Republic of China. Against the complicated global landscape, challenging tasks in pursuing reform, development and stability at home, and heavy blows from the COVID-19 pandemic in particular, the Communist Party of China (CPC) Central Committee with Comrade Xi Jinping at the core ...

A total of 100 billion yuan (about \$15.11 billion) of reloans will be issued by China's central bank to support coal development and energy storage. Simultaneously, over the next ...

New regulations open up a 100 billion yuan energy storage field percent compared to the end of 2022. The government says the addition of new energy storage installed capacity has ...

China is experiencing an explosion in energy storage projects, aimed at easing the transition to renewable energies.A striking example is the 795 MW power plant in Shandong, featuring batteries capable of storing up to 1 million kilowatt-hours of electricity, enough to power 150,000 homes for a day.

When energy storage is involved in market operation, it has certain time and space rules. When the energy storage is centric in the power grid-centric scenario, The peak-valley difference can be reduced and the service

## **New regulations open up a 100 billion yuan energy storage field**

life of the energy storage system effectively extended by maximizing the charging and discharging power from the perspectives ...

The settlement of two energy storage projects exceeding 10 billion yuan within one month marks the strong rise of Nanhai in the direction of new energy storage. Since 2018, Nanhai has proposed to build a modern industrial ...

On June 7th, Dinglun Energy Technology (Shanxi) Co., Ltd. officially commenced the construction of a 30 MW flywheel energy storage project located in Tunliu District, Changzhi City, Shanxi Province. This project represents ...

China's central bank announced a plan on Wednesday to provide 100 billion yuan in re-lending facilities to support coal development and energy storage. The country also scrapped tariffs on coal...

Major power generation enterprises nationwide have also stepped up investment in power projects since the beginning of this year, investing 136.5 billion yuan (\$18.84 billion) during the first three months, up 7.7 percent year ...

Thermal energy storage technology is an effective method to improve the efficiency of energy utilization and alleviate the incoordination between energy supply and demand in time, space and intensity [5]. Thermal energy can be stored in the form of sensible heat storage [6], [7], latent heat storage [8] and chemical reaction storage [9], [10]. Phase change energy storage ...

The company's electrolyte production line now has an output value of 1.6 billion yuan (\$247 million). ... But the steady growth of installed capacity has put a strain on the country's power system due to insufficient regulation capabilities. "Renewable energy sources including solar and wind are intermittent and volatile," said He Gang, a ...

Cao Yingfei, director of the Zhangjiagang development and reform commission, said the combined operating revenue of the city's new energy companies is expected to reach 60 billion yuan in 2023 and surpass 100 billion yuan in 2025. Zhangjiagang has many lithium-ion battery companies that are leaders in their respective fields.

The installed capacity of new energy storage projects that were put into operation during the first half of this year in China has reached 8.63 million kilowatts, equivalent to the total installed ...

In August, CATL announced the company would raise no more than 58.2 billion yuan to invest in projects related to lithium-ion batteries and new energy technology research and development ...

New energy storage refers to energy-storage technologies other than conventional pump storage. It offers

## New regulations open up a 100 billion yuan energy storage field

advantages such as a short construction period, flexible layout and fast response. An energy-storage system charges when wind power or photovoltaic power generates a large volume of electricity or when the power consumption is low, and it ...
