What is a good ESS for a coupling fast EV charging station?

A good Energy Storage System (ESS) for a coupling fast EV charging station can be considered a system including batteries and ultra-capacitors. From this brief analysis, batteries are suitable for their high energy densities and ultra-capacitors for their high power densities.

Why do EV charging stations need an ESS?

When a large number of EVs are charged simultaneously at an EV charging station, problems may arise from a substantial increase in peak power demand to the grid. The integration of an Energy Storage System (ESS) in the EV charging station can not only reduce the charging time, but also reduces the stress on the grid.
