What is energy storage liquid cooling system?

Energy storage liquid cooling systems generally consist of a battery pack liquid cooling system and an external liquid cooling system. The core components include water pumps, compressors, heat exchangers, etc. The internal battery pack liquid cooling system includes liquid cooling plates, pipelines and other components.

What is a liquid cooling pipeline?

Liquid cooling pipelines are mainly used to connect transition soft (hard) pipes between liquid cooling sources and equipment, between equipment and equipment, and between equipment and other pipelines. Pipe selection affects its service life, reliability, maintainability and other properties.

What is energy storage cooling?

Energy storage cooling is divided into air cooling and liquid cooling. Liquid cooling pipelines are transitional soft (hard) pipe connections that are mainly used to connect liquid cooling sources and equipment, equipment and equipment, and equipment and other pipelines. There are two types: hoses and metal pipes.
