The most common sources of energy are the incident solar energy and the radiation from the Earth. The wavelength at which the Sun's energy reaches its maximum coincides with the visible band range. The energy radiated from the Earth is sensed through the windows at 3 to 5mm and 8 to 14mm using devices like thermal scanners.

This lecture explains the interaction of the electromagnetic energy with the Earth's surface features. 2. Energy Interactions The incident electromagnetic energy may interact with the earth surface features in three possible ways: Reflection, Absorption and Transmission. These three interactions are illustrated in Fig. 1. Fig. 1.
