What is the growth rate of industrial energy storage?

The majority of the growth is due to forklifts (8% CAGR). UPS and data centers show moderate growth (4% CAGR) and telecom backup battery demand shows the lowest growth level (2% CAGR) through 2030. Figure 8. Projected global industrial energy storage deployments by application

How can a power supply reduce energy storage demand?

The addition of power supplies with flexible adjustment ability, such as hydropower and thermal power, can improve the consumption rate and reduce the energy storage demand. 3.2 GW hydropower, 16 GW PV with 2 GW/4 h of energy storage, can achieve 4500 utilisation hours of DC and 90% PV power consumption rate as shown in Figure 7.

What determines the final customer for an energy storage system?

These structures will determine the final customer for an energy storage system in a market, as well as the services a system is allowed to perform, and the ownership model, that is whether the system is owned by a public entity, by the transmission owner or operator, or by a third party or independent power producer (IPP).
