Are pumped storage facilities a viable solution for multi-functional power plants?

As multi-functional power plants, pumped storage facilities have a high potential to meet this challenge, because their technology is based on the only long-term, technically proven and cost-effective form of storing energy on a large scale, thereby making it available at short notice.

What is a pumped storage power station?

Their special feature: They are an energy store and a hydroelectric power plant in one. If there is a surplus of power in the grid, the pumped storage power station switches to pumping mode - an electric motor drives the pump turbines, which pump water from a lower reservoir to a higher storage basin.
