

What is radiotherapy equipment?

Radiotherapy equipment is a type of medical device used in cancer treatment. It is, however, just one element of cancer management services, which also includes early detection, diagnostic imaging, laboratory testing, pathology, surgery, systemic treatment, and palliative care.

What types of radiotherapy equipment are covered in the technical specifications?

Major radiotherapy equipment covered in the technical specifications Category Item Major treatment equipment o LINAC o cobalt-60 teletherapy unit o brachytherapy afterloader (cobalt-60 or iridium-192 based) o superficial/orthovoltage X-ray unit Associated imaging equipment o conventional simulator o CT simulator o C-arm fluoroscopic X-ray unit

What is the current state of radiotherapy access worldwide?

Radiotherapy, a life-saving cancer treatment option, is still lacking in many parts of the world. New guidance from the World Health Organization (WHO) and the International Atomic Energy Agency (IAEA) on the procurement of radiotherapy equipment could improve access to this treatment.

What equipment should be used in a radiation treatment room?

o An area radiation monitor with an acoustic/optical signal of radiation o A CCTV system for viewing of the treatment room from the console There shall be at least two in-room cameras at different locations in the treatment room and the in- room cameras shall have pan and zoom capability

Are guidelines available for radiotherapy equipment and staffing?

In this component of the HERO project, the availability of guidelines for radiotherapy equipment and staffing is examined. Under the QUARTS umbrella, a similar survey of European nations was undertaken ten years ago thus affording the opportunity to identify any significant changes in guideline development over time.

What are the functional requirements of radiotherapy software?

16 Clinical department/ ward (if relevant) Radiation Oncology Department 17 Overview of functional requirements Software to manage the flow and storage of information in radiotherapy. The software shall include modules for input of patient details, transfer of treatment plans to treatment units, and record and verification of treatments.

equipment had been procured, many radiotherapy departments found difficulty in managing the equipment and facilities The aim of this document is to provide guidance on ...

Radiotherapy is the use of ionising radiation, usually high energy x-rays to treat disease. Radiotherapy is usually used to treat malignant disease (cancer). It is sometimes used to treat benign tumours and some benign diseases. ...

Radiation Therapy (RT) is a speciality of the Oncology Department and is used for the treatment of cancer through radioactive rays generated through Linear Accelerator ...

radiotherapy equipment in cancer treatment emerged under the umbrella of the WHO Cervical Cancer Elimination Initiative The publication was developed under the ...

International Atomic Energy Agency Wagramer Strasse 5 P.O. Box 100 ... testing is a well-defined and standardized process for the purchase of other radiation therapy equipment, it is not nearly as clear-cut for RTPSs. ... systems should be made more similar to that of other equipment used in a radiotherapy department. After installation of a ...

The safety code for "Telegamma Therapy Equipment and Installations", (AERB/SC/ MED-1) and safety code for "Brachytherapy Sources, Equipment and Installations", (AERB/SC/MED-3) were issued by AERB in 1986 and 1988 respectively. These codes specified mandatory requirements for radiation therapy facilities, covering the entire

Types of radiotherapy equipment covered by the guide include external beam radiotherapy machines (both Cobalt-60 and linear accelerators), brachytherapy devices that apply radiation sources directly to tumours and ...

The publication is intended to serve as a resource for the planning and provision of radiotherapy equipment for use by administrators and clinicians as well as scientific and technical staff. The publication is consistent with the ...

Introduction External beam equipment Cobalt-60 units Linacs kV teletherapy Units Particle accelerators Brachytherapy equipment Treatment planning systems Phase-space database for external beam radiotherapy Equipment for emerging technology Image guided radiotherapy Stereotactic radiation therapy (SRT) Conventional and CT simulators

1 . INTRODUCTION -- ROLE OF RADIATION THERAPY IN CANCER MANAGEMENT Electron linear accelerators today constitute the core of the equipment of a modern radiation therapy department. Nowadays, the majority of the patients referred to a radiation therapy department are treated with a linear accelerator for at least part of their ...

Radiation Therapy Service Design Guide April 2008 . General Considerations . Overview . What is Radiation Therapy? Radiation Therapy is a clinical specialty that employs radiation to treat cancer and other medical conditions. Two types of Radiation Therapy are available; External Radiation Therapy and Internal Radiation Therapy.

Radiotherapy department energy storage equipment

Eight countries reported using multiple criteria in establishing recommended national equipment inventories and 1 country referred to "literature". 17 responders declared ...

Environmental sustainability (ES) in healthcare is an important current challenge in the wider context of reducing the environmental impacts of human activity. Identifying key routes to making clinical radiology and radiotherapy (CRR) ...

Radiotherapy is modality of medical treatment using ionising radiation such as gamma rays (emitted from radioactive source), high energy X-rays (generated by medical accelerator) and particle therapy using Hadron Therapy ...

The Linear Accelerator uses a high energy radiation beam to localise treatment on a tumour. Radiation shielding will be required, most commonly concrete is used as the primary shielding material. ... storage: 6152: Dispenser: disposable glove: Furniture/ Fitting: 2: 1: to basin: ... part of radiotherapy equipment; final qty as per manufacturer ...

External beam radiation therapy uses high energy X-Rays (or beams) targeted at a tumour and is focused on a specific area of your body. Chemotherapy is a type of medicine designed to kill or control cancer cells or help the immune system ...

External beams of radioactive waves cause damage to specific malignant cells. High-energy waves, such as gamma rays, electron beams, X-rays, or protons, are accelerated in the LINAC resulting in destroying or damaging the cancer cells. ... 12.2.1.12 Equipment Storage Room. ... The radiation therapy department shall have changing rooms so that ...

Radiotherapy department energy storage equipment representatives, exercises functions formerly vested in the U.S. Atomic Energy Commission, its Chairman, members, officers, and ... One of ...

The workflow in a radiotherapy department can be facilitated by strategic placement of the main functional areas into the concept design. ... In addition, a google search, the International Atomic Energy Agency website and the online library resources at the University of the Witwatersrand were used to locate other online resources ...

By constructing an Energy Management System (EMS) specific to the hospitals, this study aims to present the significance of using an energy storage system and an optimum schedule for power ...

Radiological data generation and storage contributes to the ecological footprint of CRR due to energy usage. 17 Unfortunately, radiological data storage is largely disregarded when assessing the environmental impact of radiology. 17 The environmental repercussions of radiological data management stems from energy consumption in data transfer ...

for any Radiotherapy equipment in new Radiotherapy facility. 10. Equipment and Source Procurement Permission Obtain authorisation from AERB for procurement of equipment (e.g. Teletherapy equipment, Brachytherapy equipment, Simulator, CT-Simulator and kV imaging system) and radioactive sources to be used in Radiotherapy equipment.

Section 4 discusses the maintenance of radiotherapy equipment and facilities, from procurement to replacement of the equipment at the end of its life. This includes various options for service contracts, depending on the type ...

Radiotherapy/Radiation Therapy: Radiotherapy is where we direct radiation towards harmful cells in the body with the intention of killing those cells. The harmful cells are often cancer cells, by radiation therapy can also be used to ...

down guidelines, the radiation therapy department in any well-established modern hospital should have at least two treatment modalities: a cobalt unit and a linear accelerator. Cobalt unit is used for deep radiation therapy and linear accelerator uses a recent technology to treat a wide range of cases [1]. Certain

OSL provides an extensive range of radiotherapy equipment, immobilisation equipment and consumables for our professional colleagues and customers to deliver precise and accurate radiotherapy. From localisation and ...

New guidance from the World Health Organization (WHO) and the International Atomic Energy Agency (IAEA) on the procurement of radiotherapy equipment could improve access to this life-saving cancer treatment option ...

In the IAEA publication 1296 [1], the IAEA provides recommendations for a basic radiotherapy department and it describes the need for a "single-photon-energy teletherapy unit" without specifying either a cobalt-60 machine or a linac. The IAEA is often in a position to provide advice to its member states who are embarking on radiotherapy for ...

This publication provides guidelines on how to plan a radiotherapy facility in terms of the strategic master planning process including the legal, technical and infrastructure ...

The department shall be provided with adequate storage for all equipment, supplies, consumable materials, medical disposables and other items in current use. ... Using these high-energy electrons (particle) beam accelerators, the patient's malignant cells and tumours of varying size and shape can be killed. ... Bonett J. Ceiling art in a ...

The radiotherapy department at the Northern Centre for Cancer Care is the largest of its kind in the region. ...

Radiotherapy department energy storage equipment

Radiotherapy is the use of high energy x-rays to treat cancers and sometimes other diseases ... Advanced forms of radiotherapy. Our cutting edge equipment means we are able to offer some of the most advanced forms of radiotherapy ...

Technical specifications of radiotherapy equipment for cancer treatment ISBN 978-92-4-001998-0 (electronic version) ISBN 978-92-4-001999-7 (print version) ... The World Health Organization (WHO)/ International Atomic Energy Agency(IAEA) Technical specifications for ... Head of the Department of Nuclear Sciences and Applications, IAEA ...
