if we look at our through-cycle outperformancers, these companies will generate three times higher revenues during the downturn versus others, and then nine times higher profitability. This growth really happened in the downturn and recovery and that really turbocharges them to go through the entire period. So companies that are able to do this

For many years, definition and production of non-renewable resources has been crucial to meeting industrial and societal demands for energy and materials. In the evolving energy transition, the priority is to meet not only the world's increasing energy requirements but also societal expectations of net zero by 2050 or sooner. Renewable energy will play a key ...
