- Select relevant technologies for energy storage, including storage and conversion components; - Design an energy storage interface for a power system or a power train, as a member working cooperatively in a small multidisciplinary team. - Share the expertise of one field in a heterogeneous team.

Compared with the cooperation network, the energy storage knowledge network has a more significant relationship with the transfer network. The knowledge elements stock of patent transferor and transferee is more relevant to patent transfer activity than the patent stock. This also proves that the knowledge and cooperation networks are decoupled.
