Could EV batteries be a 'third life' or 'fourth life' energy storage system?

Could we start seeing 'third life' or even 'fourth life' energy storage, with EV batteries deployed in multiple different systems in their lifetime? McKinsey expects some 227GWh of used EV batteries to become available by 2030, a figure which would exceed the anticipated demand for lithium-ion battery energy storage systems (BESS) that year.

Are batteries repurposing?

Batteries are an essential part of the global energy system today and the fastest growing energy technology on the market. A new standard for repurposing batteries has just been published.

Should EV batteries be repurposed?

Given the rising number of EVs, repurposing them offers a valuable solution for energy storage. Yet the road to repurposed batteries is not so smooth, as technological and regulatory challenges still remain barriers to its uptake. Not only are there risks in the process of repurposing the batteries, but in their use as well.

Are lithium ion batteries sustainable?

We make lithium ion batteries a sustainable solution. Many electric vehicle (EV) batteries can be reused before recycling. RePurpose Energy is focused on reusing EV batteries to create reliable, low-cost "second-life" energy storage systems.

How long does a second life EV battery last?

"Right now the general belief is that a second life BESS has a 10-year lifetime but this could open that up. An ESS is tantamount to a spa treatment for the battery compared to being in a bus or in a consumer vehicle." Could we start seeing 'third life' energy storage, with EV batteries deployed in three or four different systems in their lifetime?

What are the IEC requirements for repurposing a battery?

Others by the committee include IEC 63330-1 (general requirements for repurposing of secondary cells, modules, battery packs and battery systems), IEC 62933-4-4 (environmental requirements for battery-based energy storage systems (BESS) with reused batteries) and IEC 62933-5-3 (safety requirements for grid-integrated EES systems).
