Are energy storage business models the future?

The lessons from twelve case studies on energy storage business models give a glimpse of the future and show what players can do today. The advent of new energy storage business models will affect all players in the energy value chain. In this publication we offer some recommendations.

What are the business models for large energy storage systems?

The business models for large energy storage systems like PHS and CAES are changing. Their role is traditionally to support the energy system, where large amounts of baseload capacity cannot deliver enough flexibility to respond to changes in demand during the day.

How will new energy storage business models affect the energy value chain?

The advent of new energy storage business models will affect all players in the energy value chain. In this publication we offer some recommendations. The new business models in energy storage may not have crystallized yet. But the first outlines are becoming clear. Now is the time to experiment, gain experience and build partnerships.

Are energy storage projects ready for a bright future?

In anticipation of a bright future, the first projects with energy storage are being set up. We have analyzed some of these cases and clustered them according to their position in the energy value chain and the type of revenues associated with the business model.

What factors influence the business model of energy storage?

The factors that influence the business model include peak-valley price difference, frequency modulation ratio of the market, as well as the investment cost of energy storage, so this paper will discuss from the following perspectives.

What is a business model for storage?

We propose to characterize a "business model" for storage by three parameters: the application of a storage facility, the market role of a potential investor, and the revenue stream obtained from its operation (Massa et al., 2017).
