# Research on energy storage technology routes for distribution networks

Which storage technologies are suitable for employment in distribution networks?

In contrast, with the advancement of the high power and high energy density, high efficiency, environmental friendly and grid scale batteries, these devices are becoming one of the most potential storage technologies suitable for employment in the distribution networks.

How can energy storage systems improve network performance?

The deployment of energy storage systems (ESSs) is a significant avenue for maximising the energy efficiency of a distribution network, and overall network performance can be enhanced by their optimal placement, sizing, and operation.

Can distribution network systems be expanded with DG and energy storage units?

While the author in Ref. presented 'adequacy and economy analysis of distribution systems integrated with electric energy storage and renewable energy resources', proposed how distribution network systems could be expanded with DG and energy storage units, by applying a modified Particle Swarm Optimization (PSO) algorithm.

How ESS can improve a distribution network?

The objectives for attaining desirable enhancements such as energy savings, distribution cost reduction, optimal demand management, and power quality management or improvement in a distribution network through the implementation of ESSs can be facilitated by optimal ESS placement, sizing, and operation in a distribution network.

Can energy storage be used in power networks?

The study in Ref. presents the role of energy storage in power networks, and how the capacity of power networks will be met in the future, and also suggests other possible solutions apart from storage systems. The seasonal energy storage in a RE system devoid of fossil fuels has also been presented .

Which research work focuses on energy storage technologies for Transport and grid applications? The research work in Ref.focuses on energy storage technologies for transport and grid applications. The author in Ref. studies the global energy scenario and impact of power electronics in 21st century; the impact of power electronics in RE,storage technologies and electric/hybrid vehicles has also been discussed.
