Who makes custom bladders & containment devices?

Custom bladders and containment devices for all types of Subsea operations and applications. ATLspecialises in the design and manufacture of Bladder-Type Containment Systems,Liquid Reactant Bladder Storage,Pressure Compensation Devices and Delivery Systems for use in a Subsea environment.

What are flexible bladders used for?

During pre-commissioning operations, flexible bladders are used for storing cleaning and treatment chemicals which are then injected into pipelines. ATL has experience with numerous chemicals, including corrosion inhibitors, oxygen scavengers, biocides and dyes.

What are ATL bladders used for?

ATL Bladders are also regularly used in oil flushing operations, where various chemical cocktails are used to clean fuel, lube, oil and hydraulic transfer lines/systems. ATL is proud to have decades of experience supplying a wide range of Marine and Subsea organisations, providing solutions for all manner of operations. Refuelling Bowser

Why should you use ATL's flexible bladders?

Every day, ATL's flexible bladders are put to the test in the most demanding underwater oil and gas projects: Subsea Remote Intervention Systems:

How can ATL make a leak-tight bladder?

ATL's production engineers have decades of experience and numerous cutting-edge fabrication techniques at their disposal, including RF (Radio Frequency) sealing, as well as thermal, friction, ultrasonic, vulcanisation and adhesive welding. These methods yield a remarkably strong and leak-tight bladder.

What are ATL bladder tanks made of?

ATL bladder tanks are made from a variety of materials ranging from thin,flexible films to high strength fabric-reinforced rubber. These bladders,inflatables and bellows boast unparalleled chemical tolerance,abrasion resistance and remarkable durability for long term storage.
