

What is the difference between a spot market and electricity market?

Both are energy commodities but they trade very differently. The electricity spot market deals with short-term supply and demand fluctuations and offers real-time and day-ahead markets. Electric grid operators use the spot market to manage variations in electricity demand, especially during peak periods when prices can soar due to high demand.

What is the external value of energy storage in China?

For China's most widely used dual-pricing system, the external value of energy storage in the market can be regarded as reflecting and radiating value through the electricity market and capacity market, where the capacity market includes some functions of the ancillary services market.

What is post-market energy storage?

The post-market energy storage mainly refers to batteries owned by residential users or businesses, and is mainly aimed at distributed markets, similar to user-side energy storage in China. The definitions and differences of different energy storage markets are shown in Table 2. Table 2. Comparison between FTM and BTM

What is the difference between pre-market and post-market energy storage?

The pre-market relies more on a well-established market access mechanism and electricity pricing mechanism, while the development of energy storage in the post-market is mainly driven by relevant subsidy policies.

How to marketize energy storage transactions?

As the capacity market mechanism matures, it is advisable to gradually promote the marketization of energy storage transactions. Through market competition, capacity compensation prices can be formed, and ultimately, these costs can be distributed among all users through transmission and distribution tariffs. 5. Conclusion

How does energy storage work in the UK?

The revenue of energy storage in the UK front-of-the-meter market mainly comes from independent energy storage or energy storage jointly participating in the capacity market to obtain frequency regulation benefits, and the contribution of the energy market to energy storage cost alleviation is relatively small.
