

Switch off electrical equipment and recharge in seconds

Why do you need a power strip with an ON/OFF switch?

Power strips with an on/off switch are useful for saving energy. By turning off the power strip, you can cut the electricity supply to multiple devices at once, preventing standby power consumption.

What are some examples of appliances that draw power when turned off?

Household appliances like microwaves, coffee makers, chargers draw power when turned off but still plugged in. Unplug or use smart power strips to cut off power completely & reduce electricity consumption.

How to reduce electricity use in the workplace?

Encourage staff to turn off computers, monitors, printers, coffee makers etc. when they are not in use. Develop a workplace habit that electronics are shut off outside work hours, during meetings, and over lunch hours. Use posters, tips on meeting agendas, and a team attitude to reduce electricity use.

Should you unplug appliances to save electricity?

Many electronics continue to draw power even when not in use. To save electricity, unplug devices like TVs, game consoles, and phone chargers. It is not necessary to unplug every appliance, but certain devices consume standby power.

How to reduce electricity consumption & save money?

To reduce electricity consumption and save money, unplug or use smart power strips to cut off power completely to appliances like microwaves, coffee makers, and chargers when they're not in use. Additionally, switch to LED bulbs which use less electricity and last longer than traditional incandescent bulbs.

Why should you switch off electronics when not in use?

Unplugging electronics reduces this risk, ensuring safety in your home. It is crucial to adopt mindful practices to minimize our energy footprint. By switching off electronics when not in use, we can not only save money and protect the environment but also promote a safer and healthier home environment.
