

How can I connect my energy storage system?

For connecting your energy storage system, use pluggable battery connections via busbar connection or battery pole connector. Phoenix Contact offers solutions for applications up to 1,500 V, allowing you to install your systems quickly, safely, and cost-effectively.

How to connect a busbar to an energy storage system?

To connect a busbar to an energy storage system, use connectors that simplify the installation of slide-in systems. These connectors, with reverse-polarity protection, are plugged onto the rear side of a storage system and are suitable for system voltages up to 1,500 V.

Why should you use DC connectors for home storage applications?

DC connectors are especially suitable for use on battery inverters in home storage applications. Protected against polarity reversal, they prevent mismatching in common PV connection technology and battery-pole short-circuits. Energy storage systems enable the self-consumption of renewable energy regardless of when it is generated.

Why do we need special connection technology for battery storage systems?

Special connection technology optimized for use in storage systems is required to connect these systems quickly, safely, and efficiently. This includes busbar connections and battery-pole connectors, which are safe and cost-effective.

Who is THB?

THB as one of the pioneers of vehicle electronic systems is committed to the design and manufacture high speed and high & low voltage wire harness for intelligent connected vehicles.

Why do we need a special connection technology for storage systems?

Special connection technology optimized for use in storage systems is required to connect these systems quickly, safely, and efficiently. This is necessary to support the integration of renewable energy into the power grid and to alleviate the load on power grids.
