Inverter Tripping or Power Reduction. Inverter tripping or power reduction refers to a situation where your solar inverter, which converts DC power from solar panels to usable AC power, automatically shuts down or limits its output. This happens to protect your inverter and the entire grid from high voltage. The solar Inverter always syncs with the Voltage and frequency ...

Smart Intelligent Circuit Breaker (SICB) is an automated circuit recloser or breaker, which isolates the load from the source, once fault occurs. It performs action when the current / voltage component crosses the steady stability value. The stability value varies based on the load capacity or intensity of fault. It automatically switches on when the supply is regained after a ...
