What is a battery energy storage system?

A battery energy storage system (BESS) is an electrochemical device that charges from the grid or a power plant and then discharges that energy to provide electricity or other grid services when needed.

How do batteries store electricity?

Batteries and similar devices accept, store, and release electricity on demand. They use chemistry, in the form of chemical potential, to store energy, just like many other everyday energy sources. For example, logs and oxygen both store energy in their chemical bonds until burning converts some of that chemical energy to heat.

What is the main method batteries use to store energy?

Batteries use chemistry, in the form of chemical potential, to store energy, just like many other everyday energy sources. They accept, store, and release electricity on demand.

When can energy be stored in batteries?
