

How does a flywheel energy storage system work?

Most modern high-speed flywheel energy storage systems (FESS) consist of a huge rotating cylinder supported on a stator (the stationary part of a rotary system) by magnetically levitated bearings. These bearings are permanent magnets which support the weight of the flywheel by repulsion forces and are stabilised with electromagnets.

What is a flywheel energy storage system (fess)?

The technology is referred to as a flywheel energy storage system (FESS). The amount of energy stored is proportional to the mass of the rotor, the square of its rotational speed and the square of its radius. Flywheel energy storage consists in storing kinetic energy via the rotation of a heavy object. Find out how it works.

Can a flywheel energy storage system be used in underground caverns?

Some projects aim to pair solar photovoltaic panels with flywheel "fields", for example using concrete masses in underground caverns. But technical feasibility, and above all cost issues, have so far hampered these plans. The technology is referred to as a flywheel energy storage system (FESS).

How kinetic energy can be recovered from a flywheel?

When the wheel spins at its maximum speed, its kinetic energy can be recovered by using the motor as a power generator. This gradually reduces the rotational speed of the flywheel. - Highly efficient, with 80% of the stored energy able to be recovered.

How does a flywheel work?

Orlov Alexandr/ Shutterstock A flywheel is essentially a mechanical battery consisting of a mass rotating around an axis. It stores energy in the form of kinetic energy and works by accelerating a rotor to very high speeds and maintaining the energy in the system as rotational energy.

What are energy storage systems used for?

They have also been utilized in rail transport, in aircraft launching systems and by NASA in their G2 flywheel for spacecraft energy storage. They could also be used in wind turbine to store energy during off-peak periods or during high wind speeds. But that's not all.
