What are the different types of seasonal energy storage systems?

Common seasonal storage systems can be distinguished between tank thermal energy storage (TTES), pit thermal energy storage (PTES), borehole thermal energy storage (BTES) and aquifer thermal energy storage (ATES) shown in Fig. 2.1 . Fig. 2.1. Four seasonal sensible storage technologies .

What is thermal energy storage in district heating?

Thermal energy storage in district heating In general, TES systems used in DH systems are sensible heat storages. Water is used as thermal storage material in most cases except for borehole/aquifer underground storages and for pit storages with gravel or sand. Water is cheap, easy to handle and already used as heat transfer medium in DH systems.

Sensible heat thermal energy storage materials store heat energy in their specific heat capacity (C_p). The thermal energy stored by sensible heat can be expressed as $Q = m \cdot C_p \cdot \Delta T$ where m is the mass (kg), C_p is the specific heat capacity ($\text{kJ} \cdot \text{kg}^{-1} \cdot \text{K}^{-1}$) and ΔT is the raise in temperature during charging process. During the ...
