

How can energy storage help a refrigerated warehouse?

Integrating energy storage systems can effectively shift the electricity consumption of refrigerated warehouses. The capacity of energy storage needs to be optimized to maximize the benefit. Integrating a cold energy storage system has a lower capital cost but a higher O&M cost than batteries.

Which energy storage system is best for a refrigerated warehouse?

Therefore, energy storage systems, which can shift energy consumption and save costs, have attracted more and more attentions [4-7]. For refrigerated warehouses, two types of energy storage systems can be selected: the cold energy storage system and the electrical energy storage system.

Are cold and electrical energy storage systems feasible in a refrigerated warehouse?

Based on dynamic simulations, this work compared the techno-economic feasibility of integrating a cold energy storage system (Case 2) and an electrical energy storage system (Case 3) into a refrigerated warehouse. Results showed that the applications of cold and electrical energy storages in refrigerated warehouse were feasible.

What happens if warehouse temperature is below -20°C?

When the warehouse temperature is below -20°C, the refrigerated system still works to charge the energy storage system. During daytime, the stored cold energy is primarily used to provide the cooling demand of the warehouse. The refrigerated system only starts when the indoor temperature is over 50°C in warehouse.

What is the maximum capacity of energy storage system?

For the energy storage systems, the maximum capacity corresponds to the capacity that can shift all the energy demand during the high electricity period, which is between 7 AM and 11 PM.

Can energy storage save energy costs?

Conclusions Since the electricity price is higher during daytime than during night time, using energy storage to shift the electricity consumption can potentially achieve a big cost saving. Based on dynamic simulations, this paper compared the operation cost of a refrigerated warehouse with and without energy storage.
