

What are the energy storage hardware manager factory operation requirements

How should energy storage systems be designed?

Designing resilient systems: although it is impossible to design for any scenario, energy storage systems should be designed to withstand common and uncommon environmental hazards in the areas they will be deployed.

Which components of a battery energy storage system should be factory tested?

Ideally, the power electronic equipment, i.e., inverter, battery management system (BMS), site management system (SMS) and energy storage component (e.g., battery) will be factory tested together by the vendors.

Do energy storage systems need a safety assessment?

Safety Assessment: As more energy storage systems have become operational, new safety features have been mandated through various codes and standards, professional organizations, and learned best practices. The design and commissioning teams need to stay current so that required safety assessments can be performed during commissioning.

What if energy storage system and component standards are not identified?

Energy Storage System and Component Standards 2. If relevant testing standards are not identified, it is possible they are under development by an SDO or by a third-party testing entity that plans to use them to conduct tests until a formal standard has been developed and approved by an SDO.

How can advanced energy storage systems be safe?

The safe operation of advanced energy storage systems requires the coordinated efforts of all those involved in the lifecycle of a system, from equipment designers, to OEM manufacturers, to system designers, installers, operators, maintenance crews, and finally those decommissioning systems, and, first responders.

What should be included in a contract for an energy storage system?

Several points to include when building the contract of an Energy Storage System:

- o Description of components with critical technical parameters: power output of the PCS, capacity of the battery etc.
- o Quality standards: list the standards followed by the PCS, by the Battery pack, the battery cell directly in the contract.
