

What are the good profit analysis recommendations in the energy storage field

How do I evaluate potential revenue streams from energy storage assets?

Evaluating potential revenue streams from flexible assets, such as energy storage systems, is not simple. Investors need to consider the various value pools available to a storage asset, including wholesale, grid services, and capacity markets, as well as the inherent volatility of the prices of each (see sidebar, "Glossary").

Do investors underestimate the value of energy storage?

While energy storage is already being deployed to support grids across major power markets, new McKinsey analysis suggests investors often underestimate the value of energy storage in their business cases.

Why is energy storage evaluation important?

Although ESS bring a diverse range of benefits to utilities and customers, realizing the wide-scale adoption of energy storage necessitates evaluating the costs and benefits of ESS in a comprehensive and systematic manner. Such an evaluation is especially important for emerging energy storage technologies such as BESS.

Should energy storage be undervalued?

The revenue potential of energy storage is often undervalued. Investors could adjust their evaluation approach to get a true estimate--improving profitability and supporting sustainability goals.

What are the risks affecting the NPV of energy storage systems?

In addition, the value and the uncertain level of incentives would have a major impact on the profitability of the energy storage. Other important risks affecting the NPV of storage systems are the construction delay and cost overrun. These two risks have a very high impact on the profitability and high probability to occur.

What are the different types of energy storage systems?

Energy storage systems can be categorized into small and large scale systems. Small scale technologies such as batteries are mainly used by residential and industrial customers while large scale systems such as compressed air energy storage and pumped hydro are used by power suppliers . 2.1.
