What standards are required for energy storage devices?

Coordinated, consistent, interconnection standards, communication standards, and implementation guidelines are required for energy storage devices (ES), power electronics connected distributed energy resources (DER), hybrid generation-storage systems (ES-DER), and plug-in electric vehicles (PEV).

What is electrical energy storage (EES)?

Electrical Energy Storage, EES, is one of the key technologies in the areas covered by the IEC. EES techniques have shown unique capabilities in coping with some critical characteristics of electricity, for example hourly variations in demand and price.

What is IEC 62935 planning & installation of electrical energy storage systems?

IEC 62935 Planning and Installation of Electrical Energy Storage Systems This work item proposal deals with the planning and installation of EES systems and should be elaborated in close cooperation with unit parameter and testing aspects.

What does the IEC recommend?

The IEC therefore recommends regulators to achieve the conditions for all necessary cooperation between the energy markets in electricity and gas, including use of infrastructure. The IEC recommends policy-makers to make the encouragement of storage deployment a public policy goal.

What are IEC ESS standards?

IEC ESS Standards (in development or review; some of these may have scope summaries) This new work item proposal deals with general environmental requirements, specific environmental requirements of EES systems.

What are electrical interconnection guidelines & standards?

Electrical interconnection guidelines and standards for energy storage, hybrid generation-storage, and other power electronics-based ES-DER equipment need to be developed along with the ES-DER object models for power system operational requirements.
