Why do we need flexible energy storage devices?

To achieve complete and independent wearable devices, it is vital to develop flexible energy storage devices. New-generation flexible electronic devices require flexible and reliable power sources with high energy density, long cycle life, excellent rate capability, and compatible electrolytes and separators.

Why do we need a flexible energy system?

As our systems transition away from centralised, fossil fuel electricity generation sources, and unabated use of natural gas, towards renewables and low carbon gases such as hydrogen, the requirement for flexibility will change. Technologies such as, electrical or thermal energy storage will be needed to provide clean energy most cost-effectively.

What is energy system flexibility?

Energy system flexibility is the ability to adjust supply and demand to achieve that energy balance. It also allows us to keep the flows of energy through the networks within safe limits; but that is beyond the scope of FES1. To deliver energy from where it is supplied or generated to where it is needed it must be transported in some way.

What is an example of a flexible system?

For example, in a flexible system, a large-scale battery could charge up when there is additional generation and discharge this energy onto the grid when demand is highest.

What should be considered in the practical application of energy storage systems?

Besides, safety and cost should also be considered in the practical application. 1 - 4 A flexible and lightweight energy storage system is robust under geometry deformation without compromising its performance.

What is the mechanical reliability of flexible energy storage devices?

As usual, the mechanical reliability of flexible energy storage devices includes electrical performance retention and deformation endurance. As a flexible electrode, it should possess favorable mechanical strength and large specific capacity. And the electrodes need to preserve efficient ionic and electronic conductivity during cycling.
