

What kind of position do you want to apply for in the energy storage industry

What makes field a great energy storage company?

The energy storage industry is no exception. At Field, they are the glue that holds us together - whether that's by bringing new talent into the business, negotiating contracts or ensuring we have a strong balance sheet. They're absolutely essential to the Field business, enabling us to do the work we do.

What makes the energy storage industry so interesting?

The energy storage industry is still fairly young compared to others like wind or solar. This means it's rapidly growing, changing and innovating (part of what makes working in the industry so interesting).

Why do energy storage companies need a strong finance team?

Regardless of which sector they're working in, businesses need strong finance, legal and people teams. The energy storage industry is no exception. At Field, they are the glue that holds us together - whether that's by bringing new talent into the business, negotiating contracts or ensuring we have a strong balance sheet.

What role does technology play in energy storage?

Technology has a very important role to play in energy storage and has been instrumental in getting the industry to where it is now. That said, we're still learning and solving complex problems each day. This means the industry needs software developers and data scientists, along with machine learning and optimisation experts.

When do energy engineers typically work?

Energy engineers usually operate during the construction or remodeling parts of building creation so they can design and implement these programs. Their work involves lighting, air conditioning, air quality and other home or building systems.

What do energy managers collaborate on?

Energy managers may collaborate with other energy experts throughout the process to create an efficient and natural air purification system. They may focus on indoor or outdoor air quality, and sometimes both, which includes working with emissions, ventilation systems and contaminants.
