How is solar energy stored?

Solar energy can be stored primarily in two ways: thermal storage and battery storage. Thermal storage involves capturing and storing the sun's heat, while battery storage involves storing power generated by solar panels in batteries for later use. These methods enable the use of solar energy even when the sun is not shining.

What is a home solar energy storage system?

A home solar energy storage system is a device that allows homeowners to store excess energy. Generated by their solar panels for future use. The solar system consists of a battery bank, an inverter, and a charge controller. The batteries store the energy. Produced by solar panels during the day when there is plenty of sunlight.
